

ZIMBABWE

Zimbabwe Climate Change Gender Action Plan

Government of Zimbabwe

ZIMBABWE CLIMATE CHANGE GENDER ACTION PLAN

Ministry of Environment, Climate, Tourism and Hospitality in Industry in Partnership with the Ministry of Women Affairs, Community, Small and Medium Enterprises Development

1. FOREWORD

Climate Change amplifies vulnerabilities. The effects of climate change and climate change induced natural disasters have worsened gender inequalities therefore presenting a major barrier to the attainment of sustainable development. A gender analysis of the Zimbabwe Nationally Determined Contribution (NDC) commissioned in 2020 revealed that climate change can worsen existing gender inequalities within the Energy; Agriculture, Forestry and Other Land Use (AFOLU); Industrial Produce and Product Use (IPPU) and Waste sectors. Women, children, and the youth are more vulnerable to the effects of climate change due to their dependency on natural resources for their livelihoods and their lack of entitlements to help them absorb shocks. Their limited access to productive resources, combined with their disadvantaged position in society also increases their vulnerability to climate change induced distress.

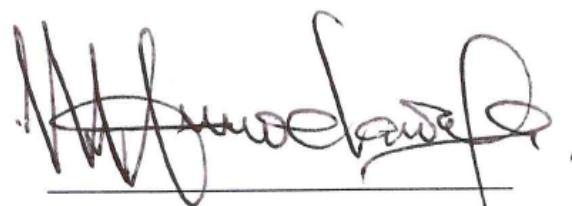

It is therefore vital to ensure that policy and programmatic responses for climate change mitigation and adaptation takes into account the constraints and interests of women, children and youth from diverse social, cultural, ethnic and religious backgrounds. For this to happen, it is important to have a Climate Change Gender Action Plan (GAP) that will strengthen women's leadership and participation at all levels of climate action and governance as derived from the GAP that was adopted under the United Nations Framework Convention on Climate Change (UNFCCC) at the 25th Conference of Parties in Madrid, Spain.

The Zimbabwe Climate Change Gender Action Plan seeks to support the country's 2030 vision towards a transformed; more efficient, inclusive, resilient and sustainable economy that does not leave anyone behind. A resultant industrialized and green economy which is gender responsive and contributes to a better life for both men and women is envisaged. This GAP is therefore a tool that can be used to implement climate change mitigation and adaptation measures across all sectors covered in the Zimbabwe revised NDCs.

It is with great pleasure that the Ministry of Women Affairs, Community, Small and Medium Enterprises Development and the Ministry of Environment, Climate, Tourism and Hospitality Industry present to you the Zimbabwe Climate Change Gender Action Plan which has been developed to facilitate the mainstreaming of gender in policies, programmes, and projects within the climate change discourse in Zimbabwe. The two Ministries acknowledge that Gender and Climate Change are both cross cutting development issues that need to be mainstreamed across all sectors towards building the resilience of communities and promoting sustainable socio-economic growth. The two ministries are committed to close the gender gap in the climate change management discourse through the implementation of this GAP which is central to achieving a low carbon and climate resilient development economy, Zimbabwe's Vision 2030 and the 2030 Sustainable Development Agenda.

Eng. F. Gondo
A/Secretary for Women Affairs;

Zimbabwe Climate Change Gender Action Plan

4. DEFINITION OF KEY TERMS

The following key concepts/terms will be used in this Zimbabwe Climate Change Gender Action Plan.

Gender: Is a socially constructed definition of women and men. Gender is determined by the conception of tasks, functions and roles attributed to women and men in society and in public and private life.

Gender Mainstreaming: It is a process of assessing the implications for women and men of any planned action, including legislation, policies or programmes, in all areas and at all levels. It is the current international approach for making women's and men's concerns and experiences an integral dimension for the design, implementation, monitoring and evaluation of policies and programmes in all political, economic and social spheres so that women and men benefit equally, and inequality is not perpetuated. Mainstreaming gender into all sectors will eliminate all negative economic, social and cultural practices that impede equality and equity of the sexes, which is informed by a gender analysis process.

Climate change: means change of climate which is attributed directly or indirectly to human activity that alters the composition of the global atmosphere and which is in addition to natural climate variability observed over comparable periods.

Vulnerability: Vulnerability is the degree to which a system is susceptible to, and unable to cope with, adverse effects of climate change, including climate variability and extremes. Vulnerability is a function of the character, magnitude, and rate of climate change and variation to which a system is exposed, its sensitivity, and its adaptive capacity.

Adaptation: Involves adjustments to enhance the viability of social and economic activities and to reduce their vulnerability to climate, including its current variability and extreme events, as well as longer-term climate change.

Mitigation: In the context of climate change, a human intervention to reduce the sources or enhance the sinks of greenhouse gases. Examples include using fossil fuels more efficiently for industrial processes or electricity generation, switching to solar energy or wind power, improving the insulation of buildings, and expanding forests and other "sinks" to remove greater amounts of carbon dioxide from the atmosphere.

Greenhouse gases: The atmospheric gases responsible for causing global warming and climate change. The major GHGs are carbon dioxide (CO₂), methane (CH₄) and nitrous oxide (N₂O).

5. INTRODUCTION AND BACKGROUND

Governments around the world have committed to action on climate change and to advance gender equality in support of women's and men's equal human rights. In 2019, at the 25th Conference of Parties (COP 25), Parties agreed to a 5-year enhanced Lima work programme on gender and its gender action plan. In doing so, Parties recognized that the impacts of climate change on women and men can often differ owing to historical and current gender inequalities and multidimensional factors. The enhanced Lima work programme on gender and its gender action plan, urged countries to take action to address climate change, respect, promote and consider their respective obligations on human rights, the right to health, the rights of indigenous peoples, local communities, migrants, children, persons with disabilities and people in vulnerable situations and the right to development, as well as gender equality, empowerment of women and intergenerational equity. The Lima work programme on gender and its gender action plan further acknowledged the continuing need for gender mainstreaming through all relevant targets and goals in activities under the United Nations Framework Convention on Climate Change (UNFCCC) as an important contribution to increasing their effectiveness, fairness and sustainability. The Government of Zimbabwe National Climate change policy is the foundation for climate change work in the country and this climate change Gender Action Plans complements it. While the Lima action plan is an important milestone in integrating gender into climate change actions, the impetus of creating this action plan is through the Nationally Determined Contribution (NDC) revision process that is currently taking place for Zimbabwe and all countries whom are signatories to the Paris Agreement.

Under the Paris Agreement parties agreed to transform their development trajectories on a course towards sustainable development, aiming at limiting warming to 1.5 to 2 degrees Celsius above pre-industrial levels. Through the Paris Agreement, Parties also agreed to a long-term goal for adaptation – to increase the ability to adapt to the adverse impacts of climate change and foster climate resilience and low greenhouse gas emissions development, in a manner that does not threaten food production. Additionally, they agreed to work towards making finance flows consistent with a pathway towards low greenhouse gas emissions and climate-resilient development. Nationally Determined Contributions (NDCs) are at the heart of the Paris Agreement and the achievement of these long-term goals. NDCs embody efforts by each country to reduce national emissions and adapt to the impacts of climate change. The Paris Agreement (Article 4, paragraph 2) requires each Party to prepare, communicate and maintain successive nationally determined contributions (NDCs) that it intends to achieve. Zimbabwe in its revised NDCs has prioritized Energy; Industrial Processes and Product Use (IPPU); Agriculture, Forestry and Other Land use (AFOLU) and Waste as key sectors.

Climate change policies and plans prepared by the Government over the years have included gender considerations to varying extent across sectors and Ministries. A preliminary assessment of sector policies shows that there are capacity gaps for mainstreaming gender in NDC policy planning. Gendered issues are not adequately prioritized and covered in sector policies that deal with issues of climate change. Gender issues are taken as standalone provisions and mostly with their own dedicated chapters and in turn, strong policy links between women's and gender concerns and climate change adaptation and mitigation have not been clearly identified in some policies.

Recognizing these gaps, the climate change GAP was developed to provide action-orientated recommendations to support a more comprehensive, inclusive and equitable approach to climate change. The climate change GAP seeks to advance women's full, equal and meaningful participation and promote gender-responsive climate policy

Zimbabwe Climate Change Gender Action Plan

and the mainstreaming of gender perspectives in the implementation of Climate Change Conventions, Policies and actions across priority NDC sectors and levels of government and stakeholders.

To inform this climate change GAP, a Gender Analysis of the four priority NDC sectors has been carried out to better understand the gaps and opportunities for gender mainstreaming in the NDCs. The analysis identified opportunities for gender integration and encourages stakeholders and sectors to consider how the country's climate policies can help achieve or promote gender-related objectives considering the gender differentiated impacts of climate change. The gender-differentiated impacts in the climate change sectors have also been analysed as part of the climate change GAP process and serve as a foundation—and impetus—for constructing of this Action Plan. The Revised National Gender Policy (RNGP) also served as one important starting point for the development of the Action Plan. The RNGP includes a number of key issues relevant to climate change and has a specific thematic area on climate change. The climate change GAP also includes activities identified in the National Climate Change Policy objectives and strategies.

6. OBJECTIVES

Objectives of the climate change Gender Action Plan are:

- To create coherence and stimulate cooperation and coordination between different government departments and stakeholders dealing with gender and climate change;
- To strategically harness linkages between different policies dealing with issues of climate change and leverage on consented actions for gender mainstreaming across policies;
- To facilitate the integration of gender considerations, such as addressing women's specific vulnerabilities and strengths into NDCs priority sectors (Energy, IPPU, AFOLU and Waste);
- To support the efforts by climate change actors in the formulation and implementation of gender responsive policies and interventions that are pro-poor and sensitive to the needs and priorities of women in particular and other marginalized groups including people with disabilities, the youth and the elderly;
- To facilitate and strengthen women's influence and participation in climate change decisions at the national and global level;
- To provide entry points for gender integration and gender-responsive actions into all climate change actions in Zimbabwe guaranteeing women and men's equal access to and benefit from climate change initiatives;
- To improve tracking, monitoring and evaluation of gender-related decisions and activities through use of gender indicators in the Monitoring and Evaluation (M&E) of adaptation and mitigation actions; and
- To increase public awareness of climate change and gender equality issues.

7. STRUCTURE OF THE GAP

Contextualized to the national circumstances the Zimbabwe Climate Change Gender Action Plan (GAP) structure and format is guided Gender Analysis (GA) that was done for the NDC revision and by the 5-year enhanced Lima work programme on gender and its gender action plan. The climate change GAP is structured to address the four priority NDC sectors (Energy, IPPU, AFOLU and Waste). It also includes "cross cutting issues" that address overall climate change intervention as guided by the key Lima priority areas. The workplan identifies the strategic objectives, strategic actions and indicators for monitoring progress and responsible institutions. As the responsible sector institutions use this climate change GAP, they also include timelines and budgets in line with their overally annual focust.

8. THE LEGAL AND POLICY FRAMEWORK

Strong interlinkages have been made between advancing gender equality and progressing sustainable development and environmental management. These links are well anchored in a global normative policy framework that promotes women's empowerment and gender equality in the context of sustainable development and economic growth—as well as in combating and coping with climate change. International, regional and national policy and legal frameworks have been put in place and signed to encourage global and country level gender sensitive action towards climate change adaptation and mitigation and to strengthen opportunities for enhancing adaptive capacities.

The Government of Zimbabwe signed the Paris Agreement, a significant milestone and evidence of the country's commitment to supporting global efforts aimed at accelerating and intensifying the actions required for a sustainable low carbon future. The Paris Agreement in its Preamble recognises that "the world's population" is not homogenous and that men, women, girls and boys are affected differently by climate change adaptation and capacity development. According to the Paris Agreement article 7(5) "Parties acknowledge that adaptation action should follow a country-driven, gender-responsive, participatory and fully transparent approach, taking into consideration vulnerable groups, communities and ecosystems, and should be based on and guided by the best available science and, as appropriate, traditional knowledge, knowledge of indigenous peoples and local knowledge systems with a view to integrating adaptation into relevant socioeconomic and environmental policies and actions, where appropriate"

As a signed Party to the Paris Agreement, Zimbabwe participates in the UNFCCC Conference of Parties (COP) where critical negotiations are made regarding countries commitments to plan, adapt and respond to climate change. By including a focus on addressing women's rights and gender equality with respect to climate change mitigation and adaptation strategies, the UNFCCC has sent a signal that gender equality and women's participation are necessary for effective action on all aspects of climate change. Other decisions that have had a special focus on gender equality in tackling climate change impacts at an international level include: 2012 Decision 23/COP.18 on gender balance and women's participation; 2014 launch of the Lima Work Programme on Gender aimed at achieving gender-responsive climate policy in all relevant activities under the Convention.

The Lima work programme on gender was agreed by Parties to enhance the implementation of their previous decisions to advance gender balance and integrate gender considerations into the work of Parties and the secretariat in implementing the Convention and Paris Agreement, to achieve gender-responsive climate policy and action. In 2019 at COP 25, the UNFCCC further adopted a Gender Action Plan (GAP) that focused on the advancement of gender equality and women's empowerment in the wake of the changing climate. The GAP calls for inclusiveness of women and men, girls and boys, as well as gender sensitive and responsive policies, programs and projects within all climate change elements of mitigation, adaptation, capacity building, technology transfer and finance.

Under the Sustainable Development Goals (SDGs), gender equality is an essential aspect of "leaving no one behind" of the 2030 Agenda. There is also a dedicated SDG on gender (SDG 5), and gender equality is considered an accelerator for achieving all the SDGs. SDG gender indicators crosscut climate indicators and vice versa. Therefore, linking climate change response to the sustainable development agenda requires an inclusive dual approach of both gender-responsive mitigation and adaptation measures to ensure progress already made in support of developmental gains can be protected, and that future efforts will not be undermined.

Zimbabwe Climate Change Gender Action Plan

Furthermore, the Gender and Climate Forum of the World Climate Conference -3 (WCC-3) highlighted that the drivers and consequences of climate change are not gender neutral, that women and men are distinct carriers, providers and users of climate information. They are affected differently by climate impacts, and therefore benefit from more contextualized climate services and interventions for resilience. Hence it is important that process and systems that guide the formulation of plans, strategies and budgeting are gender sensitive and gender responsive to address the climate change related gender inequalities. These guidelines are key when it comes to addressing gender disparities in the climate change and renewable energy strategies and policies, thus the basis for an analysis to address these disparities and gap.

Additionally, various international normative frameworks on gender calls for the need to mainstream gender in all sectors including climate change. These instruments include the Convention on the Elimination of Discrimination Against Women (CEDAW), The Beijing Platform for Action, the United Nations Resolution 1325 (2000) on Women, Peace and Security, the Protocol to the African Charter on Human and People's Rights on the Rights of Women in Africa (2003), The Solemn Declaration on Gender Equality in Africa (2004), the SADC Protocol on Gender and Development and the African Union Gender Policy (2013).

At national level, policies and strategies have been developed to guide national response measures in addressing the impacts of climate change. These include the Zimbabwe National Climate Change Response Strategy (2014) and the National Climate Policy (2018). Although the gender dimensions of strategies contained therein need to be further strengthened, these policies acknowledge that climate change exacerbates the gender dimensions of vulnerability which arise from existing social inequalities and gendered divisions of labour. The National Climate Change Response Strategy has a strategic objective on mainstreaming gender, children and youth, people living with HIV and AIDS and other vulnerable groups into all climate change interventions. The policy strategies are: to mainstream climate change in policies for the vulnerable groups with their active participation at every level; strengthen the adaptive capacity of the vulnerable groups, enhance provision of early warning systems on droughts, floods and disease outbreaks to vulnerable groups; and ensure a coordinated approach in providing them with emergency services.

The National Gender Policy (2017) has a specific thematic area on gender and climate change and promotes the mainstreaming of gender in environmental and climate change policies and strategies. It recognises that women, in particular, are vulnerable to the impacts of climate change. The key strategies proposed in the Policy are anchored on increasing gender responsiveness in national policies and strategies on climate change adaptation. National Youth Policy (2018) seeks to empower young people by creating an enabling environment and marshalling the resources necessary to undertake programmes. The aim is to develop young people's mental, moral, social, economic, political, cultural, spiritual and physical potential fully in order to improve their quality of life. Its focus on eradication of poverty and all forms of social and economic exclusion of the youth makes it important for promoting livelihoods and human wellbeing.

This climate change Gender Action Plan will therefore assist government and other stakeholders to unite and turn all the above commitments into action.

9. THE CASE FOR GENDER EQUALITY

There is need to consider gender equality issues in all climate change adaptation and mitigation actions. If gender perspectives are disregarded, the existing inequalities are more likely to be reinforced thus limiting opportunities for sustainable progress including for enhancing adaptive capacities. Furthermore, to achieve sustainable management of the environment there is need for measures that include all different population groups, including women, to adapt to climate change and strengthen their resilience to climate change risks and shocks. A gender inclusive approach ensures that marginalized groups, including women and youth, play an important role in climate change adaptation and mitigation because of their roles in core sectors that impact climate change.

Gender inequality continues to be one of the world's strongest markers for disadvantages and vulnerability to climate change. In the context of climate change, as the fourth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC) affirmed, gender will be among one of the chief socio-economic factors that determines vulnerability to climate change impacts. These individual and collective conditions are shaped by many factors, among which gender plays a key role. Gender-based vulnerabilities do not derive from a single factor but reflect historically and culturally specific patterns of relations in social institutions, culture and personal lives. Women, children and the youth are more vulnerable to the impacts of climate change as they are more dependent on natural resources for subsistence farming and livelihoods, and energy. Their limited access to productive resources combined with their disadvantaged position in society increases their vulnerability to climate change induced distress including air pollution. Often, women and their socially and culturally constructed roles and responsibilities are overlooked, undervalued, or even denied. This is especially true of the economic sector where women have limited, or restricted, access to resources, leading to differences in benefits derived from their use.

Despite some successes and development of a number of policies, strategies and programme interventions at all levels, deeply entrenched gender inequalities continue to persist, along with poor implementation of gender policies which could act as a deterrent to growth, economic development, employment creation and poverty eradication. Climate change threatens to exacerbate all types of inequalities and inequities—gender among them. Many development projects perform below their potential, because inequalities in the distribution of wealth, income, skills and employment amongst women and men. These are not identified from the outset, perpetuating the impact on a community's overall well-being. Striving for greater gender equality is beneficial to economies and communities as it represents smart economics, enhances productivity, and improves other development outcomes, including prospects for the future generations.

Realising gender equality means women and men are equally able to access and employ the full spectrum of their human rights—which is imperative for justice, in and of itself. Everywhere around the world, it is a prerequisite for an equitable and sustainable world. Driving economic, social, political and environmental transformation is another key opportunity and outcome of advancing gender equality. From household to corporate levels, women's full and equal participation and empowerment, and their access to and control of spaces and resources, allows for multifold benefits to the global community. It is therefore imperative to make gender considerations in all climate change actions. Gender mainstreaming through the development of gender specific actions plans and strategies is thus the primary methodology by which to integrate a gender approach into development and environmental efforts. The importance of the climate change GAP can be summarized through the following themes:

Harnessing the demographic dividend: Women, as well as men, significantly contribute to combating climate change as knowledgeable small-scale farmers and leaders of climate-change adaptation and mitigation initiatives. Women and the youth constitute the greater proportion of Zimbabwe's population and leaving them behind in environment and climate change processes means leaving the largest population behind. The proportion of the male to female population was 48% and 52% respectively with 60.2% of the population being under 25 years.¹

Gender and the Economy: There is an intrinsic link between poverty, women's agricultural production, sustainability, food security, the environment as well as climate change. 86% of the rural population (of which 52% are women) live below the poverty line. The poverty indicators, such as the Human Development Index (HDI)² and the estimated Gross National Income (GNI)³ per capita are lower for females (0.496) compared to men (0.535).⁴ Similarly, GNI per capita was lower for females at US\$1,360, compared to men at US\$1,822.

- Women in Zimbabwe are mostly found in lower paid, irregular and informal employment which, are prone to the vagaries of climate change.
- Approximately 80% of women in rural areas live in the communal areas, and provide 70% of the labour in agriculture and 60% of the women directly produce agricultural commodities. Whilst men largely make decisions on the cash crops grown and marketed, women are responsible for ensuring food and nutrition security for the household. More women than men depend on the environment in order to execute their gendered roles that include household provision of water and energy.
- Women have limited access to productive resources including land and capital. These inequalities in access to productive resources and assets are key factors in determining vulnerability, and how women or communities cope with, adapt to, and recover from climate change events.
- Women are vulnerable to climate change hazards. In cases of drought, women's economic positions are affected adversely because they tend to adopt depleting asset stripping strategies to meet the immediate needs of the family. Traditionally, women control small livestock and these are the first to be sold when a climate related hazard occurs, primarily because small livestock are considered as quick and easy to sell off and often men are reluctant to de-stock as such climate related hazards such as droughts, and frequent prolonged dry spells and floods, are more disempowering to women than men.

Women representation in climate change decision-making processes: The low representation of women constrains their ability to meaningfully participate in climate change decisions, adaptation and mitigation initiatives. It renders them less able to influence policies, programmes and decisions that impact their lives. The limited participation of women in policy decision making can also address the lack of sex disaggregated data common in climate change management, mitigation and adaptation which often leads to an underestimation of women's roles and contributions. This situation results in gender-blind climate change related policies and programming, which does not take into account the gender differentiated roles of both women and men (i.e. their distinct needs, constraints and priorities).

¹ Zimbabwe 2017 Intercensal Demographic Survey (ICDS)

² HDI is a summary measure of average achievement in key dimensions of human development such as a long and healthy life, being knowledgeable and having a decent standard of living.

³ GNI is the value of all goods and services produced by nationals whether in a country or outside over a specific period of time.

⁴ UNDP (2017).

The Gender Burden of Work: Various manifestations of climate change, such as drought, exacerbate fuelwood and water scarcity add more to the domestic burdens of women than to those of men. As a cultural norm, women's responsibility at household level is to secure water, food and energy for cooking and heating (reproductive roles). Increased drought occurrences, reduced rainfall and shortening of rainy seasons as well as deforestation make it harder to secure these resources. A lot of women are forced to walk longer distances in search of water and firewood. This leads to time poverty and has negative effects upon their health.⁵ The time pressures (time poverty) on women in rural areas also often mean they have fewer hours to spend on productive, income generating livelihood activities than men do.

Limited access to ICT services and equipment: Limited accessibility to media means that women are not able to make informed decisions about issues that affect their lives. It means they have less access to information on existing socio-economic opportunities that they can tap into to improve their livelihoods and enable their participation in development and climate related activities including early warning systems and appropriate climate related livelihood decisions that may guide their agricultural decision making.

⁵Adger, 2000.

10. PRIORITY AREA A: ENERGY

Strategic Objective	Strategic Activities	Deliverables/outputs/ Indicators	Time Frame					Responsible Institutions and where applicable Cost
			Y1	Y2	Y3	Y4	Y5	
A1. To Empower women to advance in the production and use of sustainable and alternative sources of Energy (solar, efficient cookstoves and biogas)	<ul style="list-style-type: none"> - Capacity building of communities (women and youths) on design, manufacturing, installation, operation, maintenance and repair of Energy Technologies (ETs). - Develop inclusive business models in order to increase market access by women and youth entrepreneurs - Train women (raise awareness) on existing best practices on the use of alternative sources of energy, (solar, cookstoves and biogas) replacing logging and production of charcoal, Incentivize and promote green Energy initiatives/and alternative sources of Energy such as ` efficient cook 	<ul style="list-style-type: none"> - Number of training undertaken - Number of women and youth in local communities capacitated and trained in alternative energy technologies. - Number of renewable sources of energy promoted to women groups - Percentage of women and men participating in design, manufacturing, installation, operation, maintenance and repair of renewable and alternative energy technologies - Amount of profit generated in the hands of women through production of alternative energy technologies 						<ul style="list-style-type: none"> - MoECTHI - MoEPD - MoWCSMED - MOFED - DEPARTMENTS AND PARASTATALS - NGOS/DEVELOPME - NT PARTNERS - PRIVATE SECTOR - RESEARCH AND ACADEMIC - INSTITUTIONS - I/NGOS/DEVELOP MENT - PARTNERS/CSOs - THINK TANKS ON ENERGY

Zimbabwe Climate Change Gender Action Plan

- Develop sector specific climate change and gender mainstreaming tools and guidelines	- Gender mainstreaming guidelines and tools for the energy sector produced		
- Implement gender sensitive budget, Monitoring and tracking funding for gender sensitive green energy investments	- Percentage of funding benefiting women and youth in green energy.		

11. PRIORITY AREA B- IPPU

Zimbabwe Climate Change Gender Action Plan

B2. To establish database on climate smart industries and service	<ul style="list-style-type: none"> - Conduct an inventory of gender and youth owned SMEs (industries and services) - Integrate registering and monitoring of women and youths owned existing and new, climate smart industries and services within existing business registration system - Undertake needs assessment on the state of eco-efficiency (environmental resource and economic efficiency) in youth and women led SMEs 	<ul style="list-style-type: none"> - An inventory/register/map of women and youths owned businesses by provinces and location - number of women and youths climate smart business registered. - A needs assessment report on the state of co-efficiency on youths and women led SMEs 	<ul style="list-style-type: none"> - MoECTHI - MOWCSMED - MOFED - MoIC - PRIVATE SECTOR - SMES - RESEARCH INSTITUTIONS 				
B3. To enhance public-private partnership climate smart investment promotion for women and youths	<ul style="list-style-type: none"> - Develop policies that promote PPP to increase investments in the development of climate smart technologies products and services by youth and women owned SMEs/ enterprises. - Forge partnerships with industry, academia and research organization on R &D of climate smart technologies and products 	<ul style="list-style-type: none"> - number of instruments on smart technologies produced - Number of research products on climate smart technologies and products produced, adapted and marketed 	<ul style="list-style-type: none"> - MoECTHI - MOWCSMED - MOFED - MoIC - PRIVATE SECTOR - SMES - RESEARCH INSTITUTIONS 				

Zimbabwe Climate Change Gender Action Plan

B4. To strengthen the gender mainstreaming capacity of institutions in the IPPU sector	- Conduct a climate change and gender audit to assess the level of climate change and gender mainstreaming in IPPU institutions, structures and policies including SMEs	- Gender audit and needs assessment reports produced - Number of women in the senior positions in the IPPU	- MoIC - MoECTHI - MoWCSMED - MoEPD - PRIVATE SECTOR - SMES
	- Train the officials to mainstream gender and climate change in IPPU policies, programmes and projects	- Number of gender mainstreaming trainings conducted - Proportion of officials trained	
	- Mainstream gender strategies and action during planning and budgeting	- Strategies and plans produced - Percentage of budget benefiting women Actions and strategies in the annual strategies	

12. PRIORITY AREA C- AFOLU

Strategic Objective	Strategic Activities	Deliverables/outputs/ Indicators	Time Frame					Responsible Institutions and collaborating institutions	Inputs and where applicable Cost
			1	2	3	4	5		
C1.To implement capacity building programmes on local level food and seed management	<ul style="list-style-type: none"> - Documentation and dissemination of Traditional knowledge systems about preserving food and seeds - Enhance extension services on farming systems that encourage crop diversification including the cultivation and consumption of indigenous and more drought tolerant food crops such as millet sorghum and sweet potatoes - Conduct research on new crops and multiple stress varieties - Domestication of traditional wild crops (traditional fruit trees and vegetables 	<ul style="list-style-type: none"> - Number of material produced and disseminated - Intellectual property protection registered on indigenous knowledge systems - Increased production and yields (or area under) of indigenous and more drought tolerant food crops such as millet sorghum and sweet potatoes - Number of new crop varieties tailored to local conditions - Number of varieties of orphan crops maintained 						<ul style="list-style-type: none"> - MoECTHI - MoAFWR - MoEPD - MoWCSMED - AFOLU NODAL SECTORS - LOCAL COMMUNITIES - NGOS - NATIONAL GENE BANK - MoHEST 	

		NT PARTNERS	
– Enhance investments in water harvesting infrastructure including infield water harvesting	– Number and type of water harvesting infrastructure (including water pumping technologies)		
– Facilitate the training and /or dissemination of Agriculture mechanization technologies amongst women and men	– penetration rate of climate smart technologies – acceptance of climate smart technologies by gender		
– Contact research, development and deployment of clean technologies for food processing, such as solar fruit and vegetable driers by women	– number of women developing and using food processing technologies created – Type of food processing technologies used by women		
– Contact capacity building programmes for communities or farmers to use alternative energy technologies including those that use renewable biomass and biomass waste as fuel.	– Number and type of alternate energy technologies in crop production and processing used by women – number of people trained in renewable biomass energy technologies – Amount of biomass converted to energy (proportion of biomass in the energy mix at local level /energy units)		

Zimbabwe Climate Change Gender Action Plan

C3. To increase Capacity of research, education and extension services with respect of gender and climate change	<ul style="list-style-type: none"> - Documentation and dissemination of IKs in weather and climate forecast 				
	<ul style="list-style-type: none"> - Create community climate information centers to enable women farmers to access climate information 	- Number of research, education and extension officers accessing climate information (long term, midterm and short term forecasts)			
	<ul style="list-style-type: none"> - Provide existing agricultural extension officers with modern ICTs linked to climate and weather monitoring systems for the benefit of farmers 	- Number of women accessing information on climate and weather and extension services			
	<p>Prioritise the training of women and youths in agricultural extension services</p> <ul style="list-style-type: none"> - Improve existing farmer training centres (to include training gender, technology and climate change) 	- Number of training centres improved			
	<ul style="list-style-type: none"> - Expose research officers to forecasts and use climate data in order to enable them to conduct research informed by climate data 	- Number of agricultural research officers trained in Climate change, climate smart agriculture and gender			

- Take audit of CSA technologies - Take audit of CSA IEC materials and Publication	- Number of adaptation and mitigation technologies in use by gender by district - Number of key players in CSA and gender by category - Number of projects on CSA and beneficiaries by gender - Number of CSA manuals developed in Zimbabwe - Number of scientific papers on CSA and gender published.	- Mainstreaming resilience in the existing women and youth funding mechanisms, strengthening or creating gender policies	- Number of gender policies/mainstreaming tools in funding mechanisms - Number of farmers trained in financial literacy
C4. To building on youth and women funding mechanisms, to increase access to women and youth farmers to be climate resilient	- Disseminate information regarding funding for women and youth farmers.	- Amount of fund disbursed to women and youth farmers - Number of IEC material produced and disseminated	

C6. To strengthen forest and land tenure rights	- Institute legal frameworks that reflects forests' multiple uses and diverse users' rights	- Legal frameworks addressing tenure rights in place	- MoECTHI
	- Reviewed agroforestry country strategy to include gender issues	- MoLAFWR	
C7. To design equitable benefit-sharing mechanisms	- Number of new gender sensitive regulations in forest protection, monitoring, equal user rights and benefit sharing, as well as resource management in place	- MoWCSMED - FORESTRY - COMMISSION - NGOS - COMMUNITIES	- MoWCSMED - FORESTRY - COMMISSION - NGOS - COMMUNITIES
	- Laws that recognize community-based tenure, including specific provisions for women	- Contracts concessions, PES schemes, REDD+ efforts) signed by both men and women	- MoECTHI - MoLAFWR - MoWCSMED - FORESTRY - COMMISSION - NGOS - COMMUNITIES
C8. To enhance climate resilience	- Carry out research that will enable the Country to benefit from future REDD++	- research on carbon sequency capacity completed - Increased area under sustainable forestry management owned by women	- MoECTHI - MoLAFWR - MoWCSMED - FORESTRY - COMMISSION - NGOS - COMMUNITIES
	- Equitable payments for environmental services and REDD+ initiatives	-	-

-	Conduct exchange visits among women's forest-related groups	- Number of exchange visits of women forest related groups				COMMISSION - NGOS - COMMUNITIES
-	Provisioning community tree nurseries with seeds and seedlings targeted to women's and men's needs	- Number of Women managed nurseries and woodlots				
-	Training of women and youths in harvesting and processing technologies for forest products, such as grasses, teas, herbs, cosmetics, medicinal, aromatic plants, sustainable charcoal, honey	- Number of training done to women and youth on management of non-timber products - Increased income and value for women in the marketing and use of non-timber products				
-	Support for collective action (such as forest user groups and NTFP marketing groups)	- Number of credit facilities available for women and youths				MoEETHI - MoLAFWR - MoWCSMED
-	Interventions introducing labor-saving technologies that free up women's time (such as nut cracking machines, trees for fodder and woodfuel, energy effect	- Number of labour saving technologies adopted for use by women - Number of forest based enterprises set up by women				FORESTRY COMMISSION - NGOS - COMMUNITIES - FINACIAL INSTITUTIONS

Zimbabwe Climate Change Gender Action Plan

C10. To build knowledge and skills on sustainable forest management of women	- Provide equitable training opportunities to meet the diverse needs and constraints (such as agroforestry techniques, beekeeping, business skills development)	- Number trained by gender	- MoFED - CSO/DEVELOPMENT PARTNERS
	- Awareness campaigns highlighting forest-related opportunities for women and men (including NTFPs)	- Number of active campaigns on forest related opportunities for women on advertising media	
	- Targeted training of female forest advisory services/extension personnel (including female "lead" forest advisors/facilitators)	- Number of training targeting female extension personnel/advisors and facilitators	
	- Supporting indigenous knowledge (mostly kept by women) with scientific knowledge	- Amount of Indigenous knowledge documented	
	- Documentation and dissemination of Traditional knowledge systems in vet botanical medicine	- Number of bio vet medicines developed	- MoECTHI - MoLAFWR - FORESTRY COMMISSION - MoWCSMED - NGOs/DEVELOPME NT PARTNERS
C11. To build capacity of women and men on appropriate livestock breeds programmes	- Enhance extension services on	- Type of extension services encouraging livestock diversification	

C12. To improve livestock production and management by women farmers	- farming systems that encourage livestock diversification for men and women farmers	- Increase number of women farmers diversifying into livestock production	- MoECTHI MolAFWR MoWCSMED NGOS
	- Mainstream gender issues at household level to promote access, control and ownership concepts	- Number of community gender awareness raising workshops	- CSOs/DEVELOPMENT PARTNERS COMMUNITIES
	- Audit number and type of livestock (activity data) across provinces	- Audit report on number and type of livestock including ownership	
	- Conduct research on suitable breeds in view of climate change for men and men farmers	- Research on animal breeds adapted to climate change	
	- Intensify research and extension of fodder production and conservation	- Participatory research papers on fodder production and conservation	
	- Increase number of irrigation schemes growing fodder crops	- % increase of areas on fodder crops	
	- Capacity building of research and extension officers in estimating GHG emission from livestock herds	- Number of training on GHG emissions from livestock	

- Capacity building in new and alternative technologies/livelihoods like fish production	- Number of training groups on alternative livelihoods			
- Destocking mechanisms and to increase off take in case of droughts	- Number and type of destocking mechanisms involving women farmers			
- Improved management of rangelands	- Number of women and men groups/communities involved in rangeland management activities			
- Improved management of manure	- Number of training to women groups on the management of manure			
C13. To strengthen the gender mainstreaming capacity of institutions in the AFOLU sector	- Put in place institutional and policy framework that promote involvement of forestry dependent communities in forestry management and benefit sharing	- Gender audit and needs assessment produced	- Number of women in the senior positions in the AFOLU	- MoECTHI - MoWCSMED - MoLAFWR - FORESTRY COMMISSION - NGOs/DEVELOPME
	- Inclusion of gender responsive mechanisms for community monitoring within the National Forest Monitoring system	- Gender sensitive national forest monitoring system		- NT PARTNERS I/NGO
